2. Connect the bent tube to the tube.
3. Connect the tube to the nozzle.
4. The tube is telescopic and can be adjusted to your height. Push the adjusting button to extend the tube, and pull back to shorten, to desired length.

Change of dust bag and filters

The size and quality of the dust bag and filters affect the machine efficiency. Use of non original dust bags or non original filters can cause restricted air flow which may lead to machine overload. Using non-original dust bag or filters will void the warranty.

2 Changing the dust bag

The dust bag indicator turns completely red when the dust bag needs to be changed.

Always use original dust bags.

3 Changing the prefilter

The prefilter protects the motor by absorbing micro-particles that the dust bag can not keep. Change the prefilter with every fifth dust bag. The prefilter is located behind the dust bag. Always use original filters.

4 Changing the HEPA filter

The HEPA filter cleans the exhaust air from micro particles the dust bag can not keep. The HEPA filter can not be brushed or washed clean if not mentioned.

Washable HEPA filter

Some models have washable HEPA filter.

Rinse the inside of the filter using lukewarm tap water. Do not use any cleaning agents and avoid touching the filter surface. Tap the filter frame to remove the water.

Do not use an external heat source, e.g. a radiator or direct sunlight to dry the filter.

Make sure to let the filter dry before putting it back into the vacuum cleaner.

Adjust the suction power

Sliding valve on the bent tube

The suction power is maximal with the sliding valve closed and minimal when all open. Adjust the suction power by putting the sliding valve in the desired position.

Power regulation

The suction power is adjusted with slider on the machine.

5 Parking the tube and nozzle

There are two grooves for parking. One located on the underside to use when machine stands on the back, and the other on the back to use when the machine is standing on its wheels.
